A Replication of Study 3 in Stellar et al. (2018): Awe and Humility

The seminal findings of the Open Science Collaboration (2015) have triggered what is now known as the ‘replication crisis’ in psychological science, prompting researchers to question thusfar unchallenged publications by and large. In an attempt to remedy this fact, there has been an ongoing effort within the psychological research community to perform replication studies, aiming to reevaluate the validity of affected publications and ultimately restore trust in the body of psychological knowledge.

The Aim of this Replicating Study

As part of the Collaborative Replications and Education Project (CREP) project of Grahe et al. (2026), we aim to contribute to endeavour described above, providing a replication study of ‘Study 3’ in Stellar et al. (2018): Awe and Humility – details regarding theoretical background and study design are outlined in the original publication. To ensure transparency, following the general recommendation of adopting the principles of open science (Schönbrodt et al., 2018), we have made all relevant materials available on the platform Open Science Framework (OSF).

Method

The hypotheses, operationalizations, analysis plan, inference criteria, and sample size justification have been preregistered at <https://osf.io/537aq>. Open material and data are available at <https://osf.io/cy287>.

Participants

The initial sample had 189 participants. We preregistered to exclude participants who did not write anything in the writing assignment (26 exclusions) or indicated that their data should not be used (1 exclusions), leading to a final sample size of $n = 162$. The final sample had a mean age of 32 ($SD = 16.2$, range: 18–77).

Measures**Procedure****Statistical Procedure****Deviations from Preregistration**

Nur wenn es welche gab.

Results**Confirmatory Results**

The results was: $\Delta M = 0.09$, 95% CI $[-0.10, \infty]$, $t(71) = 0.80$, $p = .212$.

Discussion**Limitations and Future Directions****Conclusion****References**
